

Table of L-lysine to L-arginine Ratios in Common Foods

The following table has been developed by James M. Scutero, calculated from the Agricultural Handbook, 1-23, published by the U.S. Department of Agriculture. We credit and thank the website www.Herpes.com, for publishing this table.

The way to read this table is as follows: most diets and many foods contain BOTH L-arginine and L-lysine in differing levels. **It is the RATIO that matters.**

A number in the column (the column at the far right side of the table) named 'Ratio Lys/Arg' that is **OVER 1.0 shows that there is more L-lysine in that food item than there is L-arginine.**

Remember is it OK to ingest some amount of L-arginine (and even beneficial for maintaining proper health and bodily immune functions), but those who believe that a high-lysine/low-arginine diet or total intake may help deprive viruses of one of the key nutrients, L-arginine, that viruses need to reproduce. To help regulate virus reproduction, many virology experts recommend ingesting more L-lysine than L-arginine, so you'll want to look for foods with a HIGHER 'Ratio Lys/Arg' number, and avoid those foods with a number lower than 1.0, which indicates that that specific food item contains more L-arginine than it does L-lysine.

To make the table easier to read, those foods highlighted in **GREEN**, have a higher ratio of L-lysine to L-arginine. Those foods highlighted in **ORANGE** contain more L-arginine than L-lysine.

The table above is a good representation of the L-lysine-to-L-arginine levels of a large number of foods. There are others, and you are advised to do some research online to find additional information about the L-arginine-to-L-lysine impact on virus reproduction.

Many people do not only rely on this approach when they feel the symptoms of a pending virus outbreak (“prodrome”), but take additional L-lysine supplements daily in the belief that it may help keep down-regulate virus reproduction by “starving” viruses of one of the key nutrients (L-arginine) they need to reproduce.
